6-1 Journal: Emerging Technology

Part 1:

1. What is the identification and description of each technology?
 - a. Artificial Intelligence is in simple terms a machine or collection of machines that can independently process information and perform tasks without human intervention. Quantum Computers are computers that operate under the laws of quantum physics using qubits instead of bits, A qubit can either be on, off or a superposition of both at the same time, giving it the potential to vastly outperform classical computers.
2. What are the likely impacts on computer science or your career?
 - a. AI has already had impacts (positive) on my career. I am able to use AI to help me identify problems that may be hiding in long error messages and large blocks of code. It acts as an enhancement to my capabilities. Quantum computing is still largely experimental and will likely not have a profound impact on my career for some time. However, it has had impacts on Computer Science as a whole since it represents a paradigm shift in how computing is done.
3. How might the two technologies impact humans, communities, or the world?
 - a. AI could potentially cause many jobs to become obsolete in the near future, which could cause many communities to struggle. However, right now I see it as a

massive force multiplier when used responsibly. AI gives people a tool to learn at much higher rates and can eliminate menial and repetitive tasks. Quantum computing, as I have mentioned before, could render our current encryption techniques useless and at the same time vastly expand our ability to simulate complex physics and process immense amounts of data.

4. Which course outcomes have you achieved so far, and which ones remain?
 - a. At this point, I believe I have achieved all course outcomes. The only one I had not mentioned thus far was outcome 1. By having my ePortfolio well on the way to being finished, I am creating a collaborative environment.

Part 2:

Status Checkpoints for All Categories

Checkpoint	Software Design and Engineering	Algorithms and Data Structures	Databases
Name of Artifact Used	Appointment (CS-320)	Course Catalog (CS-300)	Animal Search DB (CS-340)
Status of Initial Enhancement	Complete	Complete	Complete
Submission Status	Submitted	Submitted	Submitted
Status of Final Enhancement	Complete	Complete	Complete

Uploaded to ePortfolio	Complete	Complete	Complete
Status of Finalized ePortfolio	Complete	Complete	Pending
